1	Invitation for Tender Offers
---	------------------------------

BID Schedule

For

Bank ASIA PLC (Bank) hereby invites sealed quotations from qualified solution providers for the Supply, implementation, and support of an Enterprise Fraud Detection and Risk Management (EFRM) solution. This initiative is central to BANK's strategic roadmap to strengthen fraud detection, enhance compliance controls, and modernize transaction surveillance capabilities across all banking channels.

OEM / Bidder can offer multiple products as an option for the solution separately.

INVITATION TO BID

Bank Asia PLC invites tenders from well-reputed OEM/ bidders, proposals to offer "Supply, implementation, and support of an Enterprise Fraud Detection and Risk Management (EFRM) solution for Bank Asia PLC."

IMPORTANT BID DETAILS:

1	Name of Project	Supply, implementation, and support of an Enterprise Fraud Detection and Risk Management (EFRM) solution
2	Date of commencement of sale of Bidding/Tender/RFP Documents	<u>December 15, 2025</u>
3	Last date and time for the sale of Bidding Documents	<u>December 29, 2025</u>
4	A pre-Bid meeting with OEM/ Bidders (Date and Time)	<u>January 04, 2026, at 11:00 AM</u>
5	Last date and time for receipt of Bidding Documents	<u>January 20, 2026, at 1:30 PM</u>
6	Date and Time of Bid Opening	<u>January 20, 2026, at 3:00 PM</u>
7	Cost of RFP (Non-refundable)	Tk. 10,000/- (Ten Thousand)
8	Earnest Money Deposit Amount	15,00,000/- (Fifteen Lac)
9	Place of opening of Bids	Logistics & Support Services Division (LSSD), Bank Asia PLC, Corporate Office, Bank Asia Tower (4 th Floor), 32 & 34, Kazi Nazrul Islam Avenue, Karwan Bazar, Dhaka.

Note: -

- Technical & Financial bids will be opened in the presence of OEM/ Bidders who choose to attend as above. The above schedule is subject to change. Notice of any changes will be provided through e-mail from designated contact personnel.
- All data and information submitted with documentary evidence or company records as part of this RFP shall be considered valid and applicable as of the RFP publication date.

1. Price Negotiation

Price negotiation will be conducted by the Bank Asia Purchase Committee or the Bank's Senior Management in accordance with the Bank's policy and the committee's collective decision. The committee may, at its discretion, invite the top three technically qualified OEM/bidders for financial negotiation.

2. Award of Contract

The Bank will award the Contract to the successful OEM / Bidder. Before the expiration of the period of bid validity prescribed by the Bank and after successful negotiations, the Bank will notify the successful OEM / Bidder that his bid has been accepted. The notification of the award will constitute the formation of the Contract. Upon the furnishing, by the successful OEM / Bidder of a Performance Security (full warranty period), the Bank will promptly notify other OEM / Bidders that their bids have been unsuccessful.

The successful bidder will have to submit 10% of the total value of the work order as performance guarantee minimum validity of performance guarantee will be till the tenure (full warranty period and AMC Period) of the contract or twelve months, whichever is later. The performance guarantee shall be invoked if the OEM / Bidder fails to perform the assignments within the tenure of the contract, or in the event of the Bank terminating the contract due to non-performance and/or unsatisfactory performance. During this period, all complaints will be lodged with the vendor(s) and the vendor(s) must resolve them.

3. Bank's right to accept any bid and to reject any or all bids.

The Bank reserves the right to accept or reject any bid, and to annul the bidding process and reject all bids at any time before the award of the Contract, without thereby incurring any liability to the affected OEM / Bidder or OEM / Bidders or any obligation to inform the affected OEM / Bidder or OEM / Bidders of the grounds for the Bank's action

4. The signing of the contract / Work order

At the same time that the Bank will notify the successful OEM / Bidder that its bid has been accepted, the Bank will be sent the OEM / Bidder the Form of Contract Agreement incorporating all agreements between the parties (the Bank & the Vendor) or issue Work orders (where applicable). The successful OEM / Bidder shall sign the Form and return it to the Bank within 5 working days of receipt of the Form of Agreement.

5. The process is confidential

Information relating to the examination, clarification, evaluation, and comparison of bids and recommendations for the award of a contract shall not be disclosed to the OEM / Bidders or any other persons not officially concerned with such process until the award to the successful OEM / Bidder has been announced. Any effort by a OEM / Bidder to influence the Bank's processing of bids or award decisions may result in the rejection of the OEM / Bidder's bid.

2	Executive Summary
---	-------------------

Bank Asia started its journey on November 27, 1999, intending to be fully customer-focused by rendering technology-driven innovative products and services. The Bank obtained a Certificate of Incorporation and Certificate of Commencement of Business on September 28, 1999, and a banking license on October 06, 1999. Subsequently, the bank was listed with Dhaka Stock Exchange (DSE) and Chittagong Stock Exchange (CSE) on January 06, 2004. Since its inception Bank Asia has been working efficiently and achieved a strong prominent position in the banking sector. By this time Bank Asia has consolidated its strength manifold by extending its business rapidly while ensuring sustainable growth. Bank Asia started its most cherished Islamic banking operation in 2008 for providing strict Shariah-based products. Another subsidiary company “BA Exchange Company (UK) PLC” in the United Kingdom in the same year. Now the Bank is rendering services through its 129 Branches, 15 sub-branches, 216 own ATM & CRM & 8,523 shared ATMs across the country, 5 Islamic Windows, 4 SME/Agri Branches, 4 SME Service Centers, 2 Off-shore Banking Units, and 2 Subsidiary companies. Bank Asia is the pioneer in Agent Banking and rendering services through its 5000+ outlets.

Bank Asia's vision is to have a poverty-free Bangladesh in course of a generation in the new millennium, reflecting the national dream. Our vision is to build a society where human dignity, and human rights receive the highest consideration along with the reduction of poverty.

Background and Summary of Solution requirement:

Bank Asia currently operates multiple Core Banking Systems (CBS), including Conventional, Islamic, Agent Conventional, and Agent Islamic platforms to support a wide range of business functions, including fund transfers through Bangladesh Bank channels (BACH, BEFTN, RTGS), Alternate Delivery Channels (ATM, POS, NPSB, Internet Banking, Mobile Apps, and initial 5 FinTech collaborations like bKash, Nagad, SSL wireless etc.), and Agent Banking operations with over 5,000 active agents across the country. In addition, the Bank maintains several specialized solutions such as AML, Loan Origination System (LOS), Treasury, HRM, Remittance, and MIS platforms.

At present, the Bank manages operational and transactional risks using native tools embedded within each system. However, this **scattered and uncorrelated approach** limits visibility across channels and lacks the ability to generate **centralized, real-time alerts** for potential fraudulent or suspicious activities. As a result, identifying and responding to cross-channel or customer-level anomalies becomes time-consuming and reactive.

To address these limitations, Bank Asia intends to implement an **Enterprise Real-Time Monitoring and Fraud Detection System** that will provide:

- **Centralized monitoring** across all delivery channels and systems, integrating data from CBS, digital platforms, AML, LOS, and Agent Banking.
- **Advanced analytics and AI/ML-based behavioral modeling** to identify abnormal or high-risk transactions in real time.
- **Correlation-based risk detection**, leveraging customer information, KYC data, transaction profiles (TP), and AML parameters.
- **Automated alert generation** and workflow for immediate investigation and escalation.
- **Comprehensive dashboards and MIS reports** for management and regulatory compliance.

This enterprise-level solution will enable the Bank to move from a reactive, silo-based monitoring model to a **proactive, intelligence-driven fraud prevention framework**, thereby enhancing customer trust, regulatory compliance, and overall operational resilience.

3	Objectives
---	------------

The objective of this RFP is to engage qualified OEMs/Suppliers/Vendors/Bidders to assist Bank Asia PLC in the Supply, implementation, and support of an Enterprise Fraud Detection and Risk Management (EFRM) solution that will integrate and monitor all operational, transactional, and digital banking channels across the Bank using API.

The proposed solution is expected to establish a centralized enterprise monitoring platform leveraging advanced analytics, AI/ML-based behavioral detection, and real-time alert mechanisms to identify, prevent, and respond to fraudulent or suspicious activities. The system must be capable of integrating data from multiple Core Banking Systems, Alternate Delivery Channels (ATM, POS, NPSB, Internet Banking, Mobile Apps, FinTech collaborations), Agent Banking, AML, LOS, Treasury, HRM, Remittance, and MIS solutions.

This RFP outlines the indicative requirements and functional specifications for a robust and scalable enterprise fraud monitoring solution. The technical specifications mentioned are minimum suggestive guidelines for design and implementation. It is the OEM / Bidder's responsibility to propose optimal architecture, highlight any missing components, and suggest improvements that ensure a comprehensive and future-ready fraud detection framework for the Bank.

Any suggestions or modifications in design and scope should be communicated in written form (prior to the pre-bid meeting) to ensure that all essential components are considered for the successful implementation and operation of the system in alignment with the objectives stated in this document.

The expected outcome of the solution is to identify and minimize a holistic security program:

Implementation of the **Real-Time Enterprise Fraud Detection and Alert System** is expected to deliver significant strategic, financial, operational, and governance benefits to **Bank Asia PLC**. The key anticipated outcomes are outlined below:

Financial Impact

- **Reduction in financial losses** arising from internal and external fraudulent activities through early detection and prevention.
- **Minimized operational disruption** and revenue leakage across all banking channels, including CBS, ADC, and Agent Banking.
- **Improved recovery rate** from timely identification of suspicious transactions and customer-level anomalies.

Cost Impact

- **Optimization of resource utilization** by automating manual monitoring processes currently handled through disparate systems.
- **Reduced overhead costs** related to fraud investigation, compliance reporting, and system maintenance.
- **Enhanced ROI** through integration of existing infrastructure and leveraging AI/ML-based automation instead of standalone tools.

Governance Impact

- Establishment of a **centralized monitoring and control framework** ensuring end-to-end visibility across all channels and systems.
- **Strengthened internal governance and oversight** through unified dashboards, real-time alerts, and management-level analytics.
- Clear **accountability and escalation mechanisms** are supported by a robust alert and case management process.

Compliance Impact

- **Improved regulatory compliance** with Bangladesh Bank and global AML/CFT requirements through unified monitoring and reporting.
- **Seamless integration** with existing AML, KYC, and risk systems ensuring comprehensive compliance coverage.
- Facilitation of **timely submission of suspicious transaction reports (STRs)** and internal audit documentation.

Prevention and Proactive Action

- a. Transition from a **reactive** to a **proactive risk management model**, capable of detecting anomalies before they evolve into financial loss.
- b. **Automated, rule-based, and behavior-based alert mechanisms** that support real-time decision-making and fraud mitigation.
- c. **Predictive analytics** enabling trend analysis and early warning signals for potential emerging risks.

Risk Evaluation and Control

- **Enhanced enterprise risk visibility** through correlation of data across CBS, ADC, Agent Banking, AML, and FinTech interfaces.
- **Continuous evaluation of risk exposure** to customers, transaction, and channel levels using dynamic scoring models.
- **Data-driven insights** to support strategic decision-making in risk mitigation, fraud management, and operational efficiency.

4	Scope of Work
---	---------------

OEM / Bidders are required to propose solutions as specified in the technical and financial proposal (two copies each) for Bank Asia PLC of the following item. OEM / Bidders are required to propose their solutions under one envelope system, one for technical proposals and the other for financial proposals. OEM / Bidders are required to quote for the items and are fully responsible for offered products and implementation of the same as specified in the terms and conditions.

The scope of the bid includes the Supply, implementation, and support of an Enterprise Fraud Detection and Risk Management (EFRM) solution.

The Bank reserves the right to reduce or increase the quantity. The Bank also reserves the right to distribute the work among the OEM / Bidders or assign it to a single OEM / Bidder.

The successful OEM / Bidders shall be responsible jointly and severally for all the products and services offered by them for project management and coordination of the above-mentioned lots for the implementation of the said items at Bank Asia PLC.

The offer should include design as outlined in this document and any other items that deem necessary but not mentioned in this document. During the course of final integration, the successful OEM / Bidder will have to work together for final implementation for which they will be held jointly and severally responsible.

The selected solution provider will be responsible for enabling an EFRM solution for Bank with the following abilities:

a. Data Integration and Source Connectivity:

The system must be capable of seamless integration with all existing and future platforms of the Bank:

- Core Banking Systems (multiple CBS platforms)
- Bangladesh Bank payment channels: BACH, BEFTN, RTGS
- Alternate Delivery Channels (ADC): ATM, POS, NPSB, Internet Banking, Mobile Banking, FinTech platforms
- Agent Banking platform
- AML/CFT system (for KYC, risk rating, STR data correlation)
- Customer Relationship Management (CRM), Enterprise Data Warehouse (EDW), LOS (Loan Origination System), Treasury, Remittance, HRM, and MIS solutions
- Third-party APIs and middleware (for data ingestion from external fintech or partner networks)
- Real-time and batch data ingestion capability using APIs, message queues, ETL, or file-based connectors.
- Real-time bi-directional integration with core banking systems, digital channels, and regulatory interfaces.

b. Core Capabilities

- A robust, scalable, and configurable on-premises solution designed for enterprise-wide fraud prevention, detection, and transaction monitoring.

- The solution must be scalable to support Bank Asia's future growth requirements. It should handle increasing numbers of users, larger data volumes, and higher transaction loads without compromising performance or falling below the agreed service benchmarks.
- Schema-agnostic, Cross-channel Data Repository Structured & Unstructured Data to detect and mitigate crime no matter what the source.
- Single, unified view of the customer for holistic fraud management via cross-channel forensics and reporting for effective enterprise fraud management.
- Monitoring staff activities across the firm to see which accounts have been accessed, which changes have been made and by whom, and when to spot anomalies like unusual login activity.

Access Control and User Privilege Management:

- Access rights within the Fraud Management System shall be granted strictly on a need-to-use and role-based basis, aligned with defined job responsibilities.
- Integration with Active Directory / LDAP shall be supported for centralized authentication.
- All users, including employees, vendors, and outsourced staff and system users to interconnect with other systems must have unique user credentials with strong password enforcement and login attempt restrictions.
- User access approvals, modifications, and terminations must be properly recorded, authorized, and have scope regularly review to ensure alignment with job roles and compliance requirements.
- Session time-outs, audit trails, and maker-checker controls must be implemented to ensure accountability, data integrity, and prevention of unauthorized changes or dual-role conflicts.
- The system shall maintain comprehensive audit logs with user ID and timestamp for all input, modification, and deletion activities to support traceability and regulatory compliance.

Business Continuity and Disaster Recovery (BCP/DRP):

The proposed **Fraud Management Solution** must ensure uninterrupted business operations and quick recovery from system or infrastructure disruptions through a comprehensive **Business Continuity and Disaster Recovery (BCP/DRP)** framework.

- The solution provider should ensure the system supports business continuity and operational resiliency against system failures, data center disruptions, or wide-area disasters.
- The system must be capable of automatic failover and service continuity through High Availability (HA) configuration and redundant components across tiers (application, web, middleware, and database).
- The OEM / Bidder shall provide detailed documentation for BCP governance, including escalation matrices, contact lists, and system restoration procedures.
- The solution must integrate with the Bank's enterprise-wide BCP framework and support periodic testing and simulation of continuity scenarios.
- The solution must support real-time data replication and automated recovery between the Primary Data Center (DC) and the Disaster Recovery Site (DRS), with replication at both application and database layers.
- The solution shall enable rapid system restoration at the DRS in the event of DC failure, ensuring minimal data loss and downtime in line with defined RTO/RPO targets.
- Information security controls, including access restriction, encryption, and audit trails—must remain effective during failover and recovery operations.
- Annual DR drills and validation tests shall be conducted jointly by the supplier and the Bank, including scope, plan, and post-test reports under SLA/AMC.

Data Backup and Restore Management

- The solution must include a comprehensive backup and restore mechanism covering application, configuration, and database layers.
- Backups must support multiple modes—full, incremental, differential, and real-time—as per data classification and criticality.
- Backup restoration processes shall be fully documented

High Availability (HA) and System Resilience

- The application, middleware, and database components must support clustered architecture or equivalent HA mechanisms ensuring zero or minimal service interruption.
- The system should provide automatic failover and load balancing to maintain operational continuity during hardware, network, or software failures.
- The solution must support redundant servers, storage, and communication links with continuous health monitoring and proactive alerting.
- The vendor must propose a comprehensive HA architecture diagram as part of the technical proposal, covering both DC and DRS setups.

Application Security and Audit

The solution shall adhere to globally accepted cybersecurity and information assurance frameworks, such as the NIST Special Publications (e.g., NIST SP 800-53 and NIST SP 800-171) or equivalent international standards, ensuring comprehensive controls for system, application, and data security including not limited to:

- OWASP Top 10, CWE/SANS Top 25 guidelines for web and API security.
- Secure coding standards (CWE/SANS) to prevent vulnerabilities such as SQL injection, XSS, CSRF, etc.
- The Fraud Management application must be deployed and operated behind a reverse proxy and protected by a Web Application Firewall (WAF) to ensure secure access, prevent direct exposure to external networks, and safeguard against web-based attacks. The WAF and reverse proxy configuration must support SSL termination, request filtering, traffic inspection, and intrusion prevention in compliance with Bangladesh Bank's ICT Security Guidelines.
- The system shall enforce input validation, data sanitization, and parameterized queries to prevent injection and scripting attacks.
- Compliance with Bank Asia's information security and data privacy policies align with Bangladesh Bank.
- Provide role-based user access, segregation of duties, and strong authentication controls.
- Role-based authentication and multi-factor login for users.
- Comply with local and international information security standards.
- Support integration with centralized logging and security information and event management (SIEM) tools.
- Provide configurable data retention policies as per Bank requirements.
- System must maintain 99.9% uptime availability under redundant architecture.
- The application shall maintain automatic session time-outs, re-authentication, and account lockout after a defined number of failed login attempts (maximum 3).
- The solution provider shall perform application security testing (SAST & DAST) and submit reports prior to go-live.
- Audit logs shall be tamper-proof, time-stamped, and retained per regulatory requirements.
- The solution should provide real-time alerts for failed logins, unauthorized changes, and configuration modifications.

- Logs shall be integrable with the Bank's SIEM or monitoring system for centralized event management.
- The system shall generate on-demand audit reports for internal and regulatory review.

The system processes or interfaces with payment channels such as **ATM, POS, NPSB, Internet Banking, BEFTN, or RTGS**, it must adhere to:

- **PCI DSS (Payment Card Industry Data Security Standard v4.0)** for handling cardholder and payment data. Bank Asia is currently Certified under PCI DSS v4.0
- **PA-DSS or PCI SSF** compliance for any payment-related software modules.

c. Functional Capabilities

- Monitor transactions & activities across multiple delivery channels, i.e. core banking, internet banking, mobile banking, Agent Banking, ATM, POS.
- Capable of behavioral analytics, location profiling, peer group anomalies, trade-based money laundering, employee activity anomalies.
- Support Multiple Methods to determine legitimate vs fraudulent transactions and activities:
 - Scenario: Advanced business rules and statistical techniques to find known fraud attacks
 - AI Profiling: for contextual history of customer, employee and peer group behavior using the banks data
 - Machine Learning: Adaptive analytics and machine learning for combination of risk indicators, predictive learning, analysis and machine feedback
 - Link Analysis: for uncovering unknown risk relationships between people, accounts, and alerts
- Ability to apply all methods simultaneously.
- Generate prioritized alerts and automated escalation paths.
- Enable both real-time and near-real-time monitoring, along with batch processing options.
- **Horizontal and vertical scalability** to handle increasing transaction volumes and new channels.
- **Performance monitoring tools** to ensure real-time processing latency

d. Solution Should Include

- ✓ **Continuous real-time monitoring of all financial and non-financial transactions across all channels.**
 - **Support for rule-based, AI/ML-based, and hybrid detection mechanisms.**
 - **Detection of anomalies, such as:**
 - Unusual transaction amount or frequency.
 - Sudden behavior deviates from customer profile or transaction pattern.
 - Multiple failed authentication or login attempts.
 - Transactions from new or risky geolocations or devices.
 - Dormant accounts are becoming active suddenly.
 - **Channel-specific fraud patterns (e.g., ATM skimming, card cloning, mobile app takeovers, agent banking manipulation).**
- ✓ **Customer Profiling and Behavioral Analytics**
 - **Creation of dynamic customer risk profiles based on:**
 - **KYC data**
 - **Historical transaction patterns**

- **Geolocation, device fingerprint, and channel usage**
- **Behavioral scoring engine that updates in real time based on new data points.**
- **Identification of abnormal behavior using machine learning (e.g., deviation from typical spending or login habits).**
- Real-time module
 - **Identifying Batch of suspicious activities** with the ability to simultaneously process various types of data in real-time from a wide range of internal and external sources.
 - **Advanced rule engine** with machine learning tools, sophisticated statistical models, customizable and extensible profiling for various observation objects, dynamic threshold-based rules, peer group analysis, dynamic sequences, and advanced geolocation analytics. Configurable **rule-based engine** with capability not limited to:
 - Threshold, velocity, and pattern-based rules.
 - Cross-channel and cross-customer correlation.
 - Compound rules (e.g., combination of frequency + location + amount anomalies).
 - Ability to **schedule, simulate, and test rules** before deployment.
 - **Version control** and audit trail for all rule modifications.
 - **Machine Learning Integration** should support models trained on any platform using the standard ONNX format. Capability of the system to generate and send alerts and notifications in real time to third-party systems using standard out-of-the-box or custom connectors. Ability to forward alerts directly to the internal Case Manager module, optimizing the management of critical events.
 - **User-friendly interfaces** should provide simple and effective experience, ensuring even less experienced analysts can effectively manage and respond to alerts.
- Near Real-time Batch module
 - Batch Module with advanced solutions for fraud detection and compliance, enabling effective monitoring of customer and employee behavior and automatically alerting suspicious activity using cutting-edge detection technology. Processing data from core banking systems, aggregates, and loads into the analytics engine for fast and reliable detection.
 - Capability to apply context-aware monitoring across all access channels and payment methods, evaluating not just individual transactions, but overall account activity. Ability to identify suspicious behavior such as the use of multiple channels or small deposits masked to evade detection.
 - Powerful analytics capabilities and customizable scenario definitions to minimize false positives and negatives, optimizing fraud detection and compliance monitoring while reducing operational costs related to fraud management.
- Case Manager
 - **Case management module** allowing investigators to:
 - Review alerts and supporting transaction history.
 - Add comments, notes, or attachments.
 - Assign, escalate, or close cases with full audit logs.
 - Integration with **email, SMS, and dashboard notifications** for immediate awareness.
 - SLA-based workflow for alert handling and closure.
 - Centralized alert management, enabling real-time monitoring and response to suspicious events while consolidating notifications and relevant information in a single interface.

- Classification, assignment, and tracking of alerts through a configurable workflow. System capability to allow for detailed rule definition based on events (triggers) or time intervals, enabling analysts to apply customized processes depending on alert content, such as risk type, priority, and channel, ensuring a targeted and flexible approach.
 - Access control system and data segregation at multiple levels, to ensure maximum security and full compliance with information protection regulations. Authorized users can access only the datasets for which they have specific permissions, with the ability to define granular authorizations based on roles, levels, and states.
 - Graphical reporting for clear and immediate insights, facilitating the management's decision-making process. Reports with drill-down functionalities to enable users to explore data in detail, navigating from general analysis to detailed views with just a few clicks.
 - Network Link Visualizer, with graphical tool that maps connections between alert elements, highlighting potential fraudulent behaviors or emerging risks with clear visual insights.
 - Automatic and Manual Workflows for Business process implementation, Compliance and Analyst Efficiency,
 - Tracking business performance metrics, KPI for reporting and governance.
 - Tracking model and rules performance for optimal performance over time as data and use cases change and evolve.
- Data Manager
 - A comprehensive solution for data management and scheduling, to automate and coordinate the entire operational flow, from acquisition to processing and control validation for centralizing and optimizing daily activities, ensuring precision and reliability.
 - Dynamic scheduling system to ensure processes are executed within predefined time windows and sequences, ensuring consistency across operations. Each job to be segmented into steps, which are independent logical units within the process for maximum flexibility
 - Automatic notification system to provide alerts for anomalies or task completion, improving visibility and operational responsiveness.
 - Intelligent workload distribution to optimize resource allocation by assessing available resources, preventing server overloads, and maximizing infrastructure efficiency.

g. Reporting and Compliance

- Provide dashboards and reporting templates in compliance with the Bangladesh Financial Intelligence Unit (BFIU), Anti-Money Laundering Act as per Bangladesh Bank Directives.
- **Role-based dashboards** for management, compliance, and operational users.
- Real-time visualization of fraud trends, risk scores, and pending alerts.
- Enable customizable reports for operations, audit, and management. including:
 - STR/SAR reports
 - Channel-wise fraud statistics
 - Rule performance analysis
 - Investigator productivity metrics
- Provide support for real-time **ad-hoc query, data export** and scheduled reports in various formats (PDF, Excel, CSV).

f. Implementation Services

Before implementing the Enterprise Fraud Monitoring and Management System, a comprehensive **assessment of Bank Asia's existing applications, infrastructure, and operational processes** is essential.

- **Assessment Phase Responsibilities and Deliverables**

As part of the assessment phase, both **the selected vendor** and **Bank Asia PLC** will have defined responsibilities to ensure a comprehensive understanding of the Bank's existing technology ecosystem and its readiness for integration with the proposed **Enterprise Fraud Management System**.

The **vendor** will be responsible for conducting detailed assessments, documentation, and technical analysis, while **Bank Asia** will facilitate access to relevant systems, data, and resources. Together, both parties will collaborate to deliver all required output necessary for designing a seamless and effective implementation framework.

1. **System Landscape Document**

- Comprehensive inventory of all existing applications, platforms, and channels (CBS, ADC, Agent Banking, AML, LOS, Treasury, HRM, Remittance, MIS, etc.).
- Description of data flow, transaction types, and interdependencies among systems.

2. **API and Integration Inventory**

- Identification and documentation of all **available APIs, data feeds, message structures, and integration protocols (REST, SOAP, MQ, ISO8583, etc.)** currently in use.
- Gap analysis highlighting missing APIs or required modifications for real-time data sharing.
- Proposal for **API enhancement or middleware adaptation** where necessary.

3. **Data Source and Interface Mapping Matrix**

- Detailed mapping of **transactional, customer, and KYC data elements** required for fraud detection.
- Identification of legacy data sources and migration requirements to ensure historical and real-time data from existing Core Banking Systems (Conventional, Islamic, Agent Conventional, and Agent Islamic) are accurately migrated and synchronized with the EFRMS.
- Frequency, volume, and latency analysis of data sources to determine integration performance requirements.

4. **Manpower and Resource Requirement Plan**

- Identification of functional and technical roles needed for implementation and ongoing operations (fraud analyst, integration specialist, system admin, rule configurator, etc.).
- Estimation of resource allocation from Bank Asia and vendor teams during each project phase.

5. **Gap Assessment and Readiness Report**

- Evaluation of existing systems, processes, and infrastructure readiness for enterprise-level integration.
- Identification of **technical, operational, and compliance gaps** that may affect the deployment.
- Recommendations for infrastructure upgrades, process reengineering, or staff training (if required).

6. **Implementation Roadmap and Integration Strategy**

- A phased plan for integrating all systems with the Enterprise Fraud Management platform.
- Defined milestones, timelines, dependencies, and testing approach for API-level and data-level integration.

7. **Validation and Approval Workshop**

- Presentation of assessment findings and proposed integration plan to Bank Asia's ICT, Operations, and Risk teams.

- Collection of feedback and final sign-off before the commencement of system implementation.
- Prepare a final implementation roadmap with key deliverables, resource allocation, and change management with the Bank team.
- Conduct system configuration, testing (UAT/SIT), and assist in production rollout.
- Provide training and capacity building for risk officers, IT staff, and compliance teams.

g. Business Process Model and Notation (BPMN) and Process Visualization

To ensure transparency, efficiency, and traceability in fraud monitoring and decision-making, the **Enterprise Fraud Risk Management (EFRM)** system must include **Business Process Model and Notation (BPMN)** and **Process Visualization** capabilities. These functions will enable the Bank to design, visualize, monitor, and continuously improve fraud detection workflows and operational responses.

- Support drag-and-drop graphical modeling of fraud investigation and alert workflows.
- Allow creation, modification, and version control of fraud process diagrams.
- Enable linking of system alerts, case management, and escalation processes in a unified workflow view.
- Display live process flows showing the current status of each fraud detection or investigation case.
- Highlight active, pending, and completed process nodes for operational transparency.
- Allow filtering by branch, transaction type, or fraud category etc.
- Map alerts generated by the EFRM rule engine directly into the BPMN-based workflows.
- Trigger automated routing of alerts to designated analysts, investigators, or escalation teams.
- Support conditional workflows based on alert severity, transaction type, or risk score.
- Allow simulation of “what-if” scenarios in workflow design to predict alert load and response times.
- Ensure BPMN artifacts are aligned with operational procedures and regulatory expectations. Provide editable BPMN files and integrate them into system documentation for stakeholder review and audit readiness.

h. Channel Capacity, Performance Benchmarks, and Upgrade Sustainability:

The solution should be designed to accommodate the following channels and volumes from day one, and be able to scale on demand without re-deploying the solution to accommodate demand:

- ATM: 100,000 transactions per day
- Credit Cards: 50,000 transactions per day
- Internet Banking: 75,000 transactions per day
- BACH, BEFTN, NPSB and RTGS average 100,000 transactions per day
- Agent banking transactions 200,000 per day

The OEM / Bidder must provide a clear roadmap and cost structure for scaling the system, including additional licenses, hardware, or cloud resources required (if any). Any upgrade or expansion shall not require reimplementing of the core system or loss of existing data and configurations.

The proposed solution should ensure the capability to operate seamlessly with upgraded environments and emerging technologies. The Vendor must maintain software compatibility and support for a minimum period of seven (7) years from the date of commissioning.

5	Evaluation of Proposals and BID Evaluation Methodology
---	---

Below Evaluation of Proposals and BID Evaluation Methodology applicable for the solution

5.1 Bid Evaluation Methodology

a. Minimum Eligibility Criteria (Technical)

The details of the 'Minimum Eligibility Criteria', provided by the OEM / Bidder in its response to this RFP, will be evaluated first, based on the criteria described in this section. The technical and commercial responses to this RFP will be considered further only for those OEM / Bidders who meet the Minimum Eligibility Criteria

Sl. No.	Criteria
1.	The Bidder must be a legally established entity. Eligible entities include (i) a company incorporated under the applicable Companies Act of its country of origin, or (ii) a partnership firm duly registered under the relevant Partnership Act of its jurisdiction. Foreign OEM / Bidders participating in this international tender must submit valid evidence of legal incorporation/registration in their respective countries. Local Bidders in Bangladesh shall provide registration documents under the Companies Act or Partnership Act of Bangladesh, as applicable.
2.	Bidder/OEM should have completed implementations of the solutions and operations services for 3 years in at least 3 Bank/NBFI/Regulatory Bodies worldwide.
3.	Bidder/OEM should have the below-mentioned tools/technology & application listed in the latest industry standard report which will be preferred to fulfill the Bank/NBFI business requirements: Enterprise Fraud Detection and Risk Management Solution

Note:

- ✓ OEM / Bidder should submit documentary evidence (acceptable to the Bank) of the Information given in the related formats in respect of all above-mentioned criteria while submitting the proposal. The proposal of the OEM / Bidder who does not fulfill the above criteria or who fails to submit documentary evidence to the satisfaction of the Bank would be rejected.
- ✓ OEM / Bidders fulfilling the Minimum Eligibility Criteria will only be considered for further technical evaluation.

Terms of Joint Venture company:

The tender submitted by a joint venture of two or more OEM / Bidders / firms as partners shall comply with the following requirements:

- The Tender shall be signed so as to be legally binding on all partners.
- One of the partners shall be nominated as being in charge; and this authorization shall be evidenced by submitting a notarized or registered Power-of-Attorney signed by legally authorized signatories of all the partners.
- The partner in charge shall be authorized to incur liabilities and receive instructions for and on behalf of any and all partners of the joint venture and the entire execution of the contract, including payment, shall be done exclusively with the partner in charge.
- All partners of the joint venture shall be liable jointly and severally for the execution of the contract in accordance with the terms of RFP, and a statement to this effect shall be included in the authorization

- A copy of the Contract (all party) Agreement entered into by the joint venture partners shall be submitted with the Tender; and
- Partners must not be blacklisted or debarred by government or any other authorities (local and oversize).
- All participating partners must possess valid and up-to-date business operating documents, including Trade License, VAT Registration, Taxpayer Identification Number (TIN), and current Tax Clearance Certificate, or their legally equivalent documents in the bidder's country of registration. Foreign bidders shall submit certified copies of corresponding documents issued by the competent authority of their respective jurisdictions.
- A Joint Venture Agreement (JVA) must be submitted with the tender signed by all partners, clearly stating Lead Partner (authorized representative), Responsibilities of each partner (technical, financial, execution), Shareholding ratio or percentage of work/financial responsibility, Joint and Several Liability clauses (all partners are equally responsible for project completion)
- The second party in a JV must meet all technical requirements for eligibility.
- Combined financial capacity (turnover, liquid assets, credit line) of all JV partners will be considered.
- All partners are jointly and severally liable for successful execution of the contract.
- A Tenderer shall submit only one (1) Proposal for the Tender, either individually or as a Member of a JVCA. A Tenderer who submits more than one (1) Proposal for the Tender will cause all the Tenders with that Tenderer's participation to be rejected.
- Successful OEM / Bidder must submit the tri-partite agreement. However, sample agreement should be submitted during the proposal submission.

b. Technical Evaluation

Selection will be based on the Quality and Cost Based Selection (QCBS) method. The breakdown of the evaluation components is as follows:

- Technical compliance and functionality
- Relevant experience and client references in Bangladesh and other countries
- Implementation approach, training, and support
- Price and payment terms

The technical bid will be analyzed and evaluated, based on which the Technical Score (TS) shall be assigned to each bid. The mark distribution criteria of the technical evaluation are as follows:

TECHNICAL SCORING MATRIX (As per the specification)		
Sl. No.	Details	Marks*
Strength of the Tenderer		Max 5
1.	Total Turnover of the Tenderer for the last three years	
2.	Asset of the Tenderer according to last year's financial	
3.	Liabilities of the Tenderer according to last year's financial	
4.	Profit/Loss of the Tenderer according to last year's financial	
5.	TAX (or equivalent statutory records applicable in the country of registration) paid in the last year according to last year's financial	
6.	VAT (or equivalent statutory records applicable in the country of registration) paid in the last year according to last year's financial	
7.	Bank Solvency of the Tenderer	
8.	Office Space (SFT)	
9.	Number of Employees of the Tenderer	
10.	Other Logistics Facilities	
Note: Please share the below data at the time of bid submission.		

All mandatory features mentioned in the technical specification must be demonstrated before the Bank Asia evaluation team. The technical evaluation will be conducted out of 100 marks, which will subsequently be converted to 75 marks for the final evaluation.		75
Proposed solution Implementation experience	The number of Implementations of integrated solution carried out in Bangladesh and other country (during the last 3 years as on date of issuance of RFP). (Bank in Bangladesh will carry 5 marks or/and outside Bangladesh More than 5 banks-10 Marks, 4-5 banks-8 Marks, 3 banks -5 Marks)	Max 10
Functional Capability	Coverage of all fraud types and channels; real-time monitoring; rules engine; alert management; BPMN process flow; case management; audit trails; configurable workflows.	Max 30
Integration & Interoperability	Seamless integration with multiple CBS platforms, AML, HRM, Treasury, LOS, and MIS systems; API availability; real-time data ingestion; scalability; interoperability (ISO 20022, JSON, XML).	Max 10
Security & Compliance	Compliance with PCI DSS, ISO 27001 data encryption; role-based access control; audit logs; adherence to Bangladesh Bank & BFIU regulatory requirements.	Max 10
Analytics, AI & Proactive Detection	Use of machine learning, pattern recognition, adaptive risk scoring, anomaly detection, and predictive fraud modeling; rule-tuning and analytics dashboard capability.	Max 20
Implementation, Support & Manpower	Vendor's implementation plan, project governance, on-site/off-site support, manpower allocation, training and knowledge transfer, SLA adherence, and previous experience.	Max 10
Governance, Reporting & Process Visualization	Real-time dashboards, escalation matrix, process visualization (BPMN), automated reporting, and oversight committee enablement.	Max 10

c. Financial Proposal/Commercial response:

The financial proposal marks will be calculated in 20 of the total evaluation criteria.

6	OEM / Bidders Qualification, General Terms & Conditions
---	--

The OEM / Bidder is expected to examine carefully the contents of the bidding documents. Failure to comply with the requirements of bidding submission will be at the OEM / Bidder's own risk, which is not substantially responsive to the requirements of the bidding documents will be rejected. Manipulation or any kind of unusual approach or failure to submit the proposal/offer within the stipulated period will be treated as "Disqualification" to attend the bidding. Below terms and conditions below are applicable.

- 6.1 The bidder should be an Authorized Partner of the offer (other than the OEM) or a certified copy from Headquarter (in case of OEM).
 - Enterprise Fraud Detection and Risk Management (EFRM) solution
- 6.2 The OEM / Bidder as a registered company should have a legal entity to enter into contracts with at least 3 years of experience in the relevant business.
- 6.3 The OEM / Bidder must have its own office or an authorized representative office in Dhaka, Bangladesh or in other supporting country with full-time operational presence. The office shall be equipped with dedicated service, support, and system-upgrade facilities, staffed with adequate numbers of qualified and certified technical personnel capable of providing installation, maintenance, troubleshooting, and ongoing support for the proposed products, systems, and solutions.
- 6.4 The Tenderer shall submit a refundable Bid Security amounting to BDT 15,00,000 (Fifteen Lakh). The Bid Security must be furnished in the form of a Payment Order or an unconditional and irrevocable Bank Guarantee (BG), made in favor of 'Bank Asia PLC'
- 6.5 The Bidder must be a regular taxpayer in Bangladesh and shall submit valid evidence of compliance with tax obligations, including an active TIN and the most recent Tax Clearance Certificate issued by the National Board of Revenue (NBR). Foreign bidders, if not tax-resident in Bangladesh, must comply with applicable tax regulations for international entities as required under Bangladeshi law.
- 6.6 The bidder/OEM must have past performance on installation, commissioning, data migration, optimization, and maintenance of the relevant products for at least 3 (Three) organizations preferably in the banking sector. Details of the experience and past performance of the OEM / Bidder are to be submitted along with the bid in support of proof.
- 6.7 The bidders must submit a Manufacture Authorization Letter from the respective OEM (Original Equipment Manufacturer) if applicable (other than the OEM) or a certified copy from Headquarter (in case of OEM).
- 6.8 A physical and online pre-bid meeting will be held at Bank Asia ICT Meeting room and Virtually (link shall share at the meeting date) for more clarification (if any) at 4:30 PM on January 05, 2026. Attendance is strongly encouraged by all interested bidders.
- 6.9 OEM / Bidders must submit the following documents along with their offer and their offer

would be in their own Letter Head Pad and signed by any authorized persons:

- 1) 2 years' experience certificate in a similar type of project
- 2) Income Tax certificate (last Year) - or equivalent statutory records applicable in the country of registration
- 3) VAT certificate (or equivalent statutory records applicable in the country of registration)
- 4) Valid Trade License/Memorandum (or equivalent statutory records applicable in the country of registration)
- 5) Company profile.
- 6) Provide a list of customer references for the mentioned solution in Bangladesh or Asia region with the name of the contact person, address, and telephone number.
- 7) A distributorship Certificate' from the principal/Manufacturer must be submitted including a Draft SLA.
- 8) Brief about post-implementation support facilities.
- 9) Implementation and Rollout Plan.
- 10) Detail project Implementation plan, schedule, Gantt chart, communication and escalation matrix, Assigned Project Manager, etc.
- 11) OEM / Bidder must submit an excel sheet via email, with appropriate data for the following response immediately after dropping the bid at Bank Asia.
 - Strength of the Tenderer and evaluation information as guided format
 - Technical specification response as guided format,
- 12) All soft copies of information need to be submitted to Bank Asia's official mail infotender@bankasia-bd.com by 6:00 pm January 21, 2026.

6.10 Bid security may be forfeited-

- i. If the OEM / Bidder withdraws its bid during the period of bid validity specified in the bid form.
- ii. If a successful OEM / Bidder fails to sign the contract.
- iii. If the OEM / Bidder provides any false certificate and makes fraud and forgery at the time of bid submission.

6.11 The OEM / Bidders should have to quote the unit price & total cost both in figure and words as per the given format and there should not be any cutting/erasing/overwriting.

6.12 If anyone wants to offer multiple solutions for the same product financial will be considered with the highest offer.

6.13 In the price proposal if the values in digits and words differ then the value in words will prevail. Again, if the total value does not match with the calculated value (Unit Price X Quantity) then the total value will be recalculated by multiplying the quantity by the unit price.

6.14 Emphasis will be given to the quality and technical details of the item(s). So, Bank is not bound to accept the lowest bid. Bank reserves the right to accept or reject any or all the quotations without arising any reasons whatsoever.

6.15 The Bank reserves the right to reduce or increase the quantity. The Bank shall have also reserved the right to distribute the work among the OEM / Bidders or assign it to a single OEM / Bidder.

- 6.16 VAT, Taxes, etc. shall be deducted from the bill as per the approved rate of the National Board of Revenue, Bangladesh.
- 6.17 VAT will be exempted from the price. If the OEM / vendor can provide the necessary documents as per NBR rules. In the absence of such eligible documentation, VAT shall be applied as per prevailing NBR guidelines.
- 6.18 If the Tenderer submits any wrong information, then the Bank reserves the right to reject their quotation partially or fully.
- 6.19 The supplier must obtain formal written work orders from the Bank management before supply and shall share NDA/Engagement Letter/SLA etc. as per Bank Policies.
- 6.20 The offer/bid must be made in an organized, structured, and neat manner. Brochures/leaflets etc. should not be submitted in loose form. The suggested format for submission of a technical offer is as follows:
- (i) Index
 - (ii) Covering letter.
 - (iii) Details of the OEM / Bidder.
 - (iv) Warranty details (for all relevant schedules). Note that, this should not contain any price information.
 - (iv) Delivery Schedule.
 - (v) Technical Documentation (Product Brochures, leaflets, manuals, etc.).
 - (vi) An index of technical documentation submitted with the technical offer/technical bid must be enclosed.
 - (vii) Offer/ bid must include photocopies of relevant documents/certificates for supporting claims and representations made by the OEM / Bidder
 - (ix) The OEM / Bidder should also include OEM / Bidder capabilities in their technical bid.
- 6.21 Documents comprising the bid
The bid submitted by the OEM / Bidder shall comprise two envelopes submitted simultaneously, one containing only the "Technical Proposal" and the other the "Financial Proposal" (Two copies each).
- 6.22 The technical proposal shall contain the following:
- a. Signed bid document.
 - b. Power of attorney (authorizing the person to sign and initial the bid document on behalf of the company);
 - c. Documents showing eligibility of the OEM / Bidder as mentioned in this document;
 - d. Response to the eligibility criteria as mentioned in this document;
 - e. Technical description of the deliverables to demonstrate the specified technical requirement;
 - f. Response to the OEM / Bidder's profile as mentioned in this document;
 - g. Response to the technical specification as mentioned in this document;
 - h. Bid form for technical proposal; and
 - i. Any other things required for the technical proposal.

- 6.23 The financial proposal shall contain the following:
- Bid security (Original);
 - Bid form for financial proposal;
 - Schedule for financial proposal as mentioned in this document; and any other things required for financial proposal
- 6.24 Bank Asia PLC reserves the right to adjust arithmetical or other errors in the bid, in the way Bank Asia PLC considers appropriate or deem fit. Any adjustments so made by Bank Asia PLC shall be stated to the OEM / Bidder if Bank Asia PLC makes an offer to accept his bid. The final decision as to any error manifest or otherwise shall be at the sole discretion of Bank Asia PLC and be final, conclusive, and binding on the OEM / Bidder.
- 6.25 Bidders/OEM must submit the description of their support team with the profile of experts for the items they will supply.
- 6.26 Bidder/OEM should have 2 (Two) ongoing AMC support on the offered product. Distributorship Certificate' from the principal/Manufacturer must be submitted.
- 6.27 Bidder/OEM must provide regular software updates to the proposed system as part of its maintenance program. In this context, the bidder/OEM should provide their existing software update and patching schedule to demonstrate their software update rhythm.
- 6.28 During the implementation phase minimum of two (preferably one from OEM & One from partners) technical subject matter experts must be provided by the OEM / Bidder on-site for the smooth functioning of solutions up to successful project completion.
- 6.29 Validity of Price Quotation must be for a minimum of 12 (twelve) months.
- 6.30 Bidder/OEM will have to ensure that their technology and support will be available for the next 7 (seven) years.
- 6.31 The information provided by the OEM / Bidders in response to this Tender Document will become the property of Bank Asia and will not be returned.
- 6.32 Bank Asia reserves the right to purchase partially, amend, rescind, or reissue this Tender Document, and all amendments will be advised to the OEM / Bidders and such amendments will be binding on them.
- 6.33 Product warranty will be 03 (Three) years including support services, subscription, etc.
- 6.34 AMC (4th year) will be started after the warranty period (After the 3rd Year).
- 6.35 After completion of 03 year period, the next 03 (three) years' Annual Maintenance Contract (AMC) will be started automatically including full support services, subscriptions, etc. with the same AMC (4th, 5th & 6th Year) price. Bank may continue the AMC agreement for subsequent years. Payment will be made yearly basis.

- 6.36 The OEM / Bidder should submit a “Technical Proposal” and “Financial Proposal” in a separate sealed envelope for each. The OEM / Bidder should submit a “Technical & Financial Proposal” with one additional copy in a sealed envelope for each.
- 6.37 Individual Product Part Number should be incorporated with the Technical Proposal where applicable.
- 6.38 Summary price should be given as per mentioned format in “8. Financial Proposal Submission Format”.
- 6.39 Awarded OEM / Bidder must submit 10% of the total work order value as a bank guarantee before receiving the work order, which will be released after the successful completion of the Project. If a OEM / Bidder fails to deliver all the products the Bank’s Guarantee will be forfeited.
- 6.40 The OEM / Bidder must submit a draft copy of the SLA and NDA separately. NDA (Non-Discloser Agreements) must be signing both Local Supplier and OEMs with Bank as they work with Bank's Sensitive Data. The Supplier shall not, without the Bank’s prior written consent, disclose the Contract, or any provision thereof, or any specification, plan, drawing, pattern, sample, or information furnished by or on behalf of the Bank in connection therewith, to any person other than a person employed by the Supplier in the performance of the Contract. Disclosure to any such employed person shall be made in confidence and shall be extended only so far as may be necessary for purposes of such a performance.
- 6.41 The OEM / Bidders must submit each proposed item BOQ separately including the details of part numbers and/or Manufacturer’s Warranty.
- 6.42 The scope will be but not be limited to delivering, installation, configuration, and integration.
- 6.43 License detail (module, user, etc.) must be submitted by the OEM / Bidder
- 6.44 Standard operating procedure (SOP) to be provide after implementation of the solution.
- 6.45 Additional integration of devices with EFRM required for the agreed Channels before completing the UAT will be done by the OEM / Bidder without any cost before handover or closer the project.
- 6.46 Maintain all the solution software support by 24/7/365 days without any interruption under the warranty or AMC.
- 6.47 Provide patches, updates, upgrades, Security Enhancement, bug fixes, and new project integration as required to maintain compliance and standard practice preferably without any service interruption.
- 6.48 The solution supplied by the OEM / Bidder must coherently work with the existing applications, network & security devices of Bank Asia.
- 6.49 In the event of any Data Breach, Data Loss, or suspected security compromise occurring at any time when data is temporarily transmitted through or processed within the

solution provider's cloud or any external system managed by the solution provider, the Vendor shall:

- i. Notify the Bank in writing within 4 hours of becoming aware of the incident, providing immediate preliminary details;
- ii. Submit a comprehensive incident report detailing the nature, cause, scope, timing, and potential impact of the breach;
- iii. Cooperate fully with the Bank, its designated representatives, and relevant regulatory authorities (including Bangladesh Bank, if applicable) in investigating, mitigating, and resolving the incident;
- iv. Take immediate corrective actions—at its own cost—to contain, mitigate, and remedy the effects of the breach, including full restoration of lost or corrupted data; and
- v. Implement preventive measures to ensure that similar incidents do not recur, and provide the Bank with an assurance report outlining the remedial actions taken.

All responsibilities, liabilities, and costs associated with a Data Breach or Data Loss, including investigation, recovery, regulatory compliance, and customer notification—shall rest entirely with the Vendor.

- 6.50 All items should be delivered as per specifications, if different from the published specifications, the Bank authority will reserve the right to reject the same on the spot and payment will not be made for rejected items.
- 6.51 Proper bills of material (BOM) have to be provided for the quoted product.
- 6.52 The warranty period will start with the successful implementation of solutions for all the required echo systems. The warranty should be backed up by a similar back-to-back warranty between the supplier and the principal of the Bank Asia project for any delay.
- 6.53 Implementation diagram must be submitted with the technical proposal.
- 6.54 Solution provider required to submit all necessary hardware specifications to operate the solution from day one for the capacity with reference “h”. Channels and Transaction Volume”
- 6.55 According to the proposed solution necessary third-party software license ,if required need to be mentioned in detail.
- 6.56 Training:
- The OEM / Bidder shall arrange and conduct an implementation training program at least for twenty (20) personnel, with a total duration of forty (40) hours minimum, delivered over 10 (10) days (i.e., four (4) hours per day). The training place is preferably on the bank premises and focuses on the solutions.
 - The OEM / Bidder must arrange lab-based administrative training for five (05) personnel at an OEM-certified training center, either in the product's country of origin or at an OEM lab in any other country.

- Training costs should be submitted separately from the product price.
 - A training schedule in the form of Gant chart and the CVs of the instructors must be submitted with the training proposal. Training should be provided after the work order is given and it should be completed within 1 (one) month of the day work order is received. In the event of foreign training all the expenses, e.g., airfare, hotel expenses, local travel, food, etc., should be borne by the OEM / Bidder.
- 6.57 The Supplier will be entirely responsible for all applicable taxes, duties, levies, charges, and license fees in connection with the delivery of solution at the site as per Government rules & NBR.
- 6.58 No Advance will be paid. Payment shall be made after deducting VAT, Income Tax & other Govt. Taxes (if applicable) from the bill as per Government rule. Payment shall be made in the form of a Payment Order in favor of the form(s) only after completion of the work(s) complying with all specifications, terms & conditions. However, payment only after full and successful implementation of each lot. The Bid Security (Shall be valid for 1 year from bid submission date) / Performance guarantee (Shall valid up to end of AMC period) will be released after the successful completion of the AMC period. During this period, all complaints will be lodged with the vendor(s) and the vendor(s) must resolve them.
- 6.59 Penalty:
In the event of delay in completion of the project where the delays were not caused due to any fault of Bank Asia or any Force Majeure following provisions of penalty shall be applicable:
- a) 1% of the total price per week delay.
 - b) The maximum amount of the total penalty will be 10% of the total price.
 - c) For the avoidance of doubt, the date of the kickoff meeting with Bank Asia shall be used as the starting date of the project when calculating delays.
- 6.60 Delivery period:
Please mention the delivery lead time with the implementation period.

7	Technical Specification Details
---	--

The selected solution provider will be responsible for enabling an EFRM solution for Bank with the following abilities in addition to details mentioned in scope of work (solution requirement) in section 4.

Physical Infrastructure Requirements

Solution providers are requested to provide details of the required infrastructure as follows:

- During UAT
 1. Server hardware specifications and quantity
 2. Resource requirements for each of the VM/Application servers
- During Go-Live for DC and DR
 1. Server hardware specifications and quantity
 2. Resource requirements for each of the VM/Application servers
- Solution and documents details containing the following information
 1. Assumptions details in preparing the proposal
 2. Services offered
 3. Overview of the solution
 4. Solution High-Level view
 5. Solution place in the security stack
 6. Solution modules and capabilities
 7. Implementation services details
 8. Manpower and Resource Requirement Plan
 9. Training services details
 10. Out of Scope Items
 11. Project organization
 12. Change control process
 13. Project deliverable acceptance
 14. Schedule of project responsibilities
 15. Project timeline
 16. Machine learning timeline

Manpower and Resource Requirement for Fraud Management System Implementation from Bank Asia

Identification of key resources from relevant divisions such as ICT, General Banking, Loans & advances, Foreign Trade, AML & Compliance, Cards, and ADC etc.

Nomination of business experts for each domain, specifying as below:
